UNITED STATES PATENT OFFICE.

WILLIAM W. JACKSON, OF PHILADELPHIA, PENNSYLVANIA, ASSIGNOR TO
THE MACKELLAR, SMITHS & JORDAN COMPANY, OF SAME PLACE.

DESIGN FOR A FONT OF PRINTING-TYPE.

SPECIFICATION forming part of Design No. 19,810, dated May 6, 1890.

Application filed April 11, 1890. Serial No. 347,535. Term of patent 7 years.

To all whom it may concern:

Be it known that I, WILLIAM W. JACKSON, a citizen of the United States, and a resident of Philadelphia, Pennsylvania, have invented a new and original Design for a Font of Type, of which the following is a specification.

My design for type font is clearly illustrated in the accompanying typographical impression.

The general character of the design is that of a solid-letter font, the special features of the design being the particular characteristics of certain of the letters, as hereinafter set forth.

In the "upper-case" letters the letter A has a projection at the upper end; the loops of the letter B terminate in a sharp point in contact with the vertical bar; the upper portion of the letter C is straight and joins a long curve which extends to the lower right-hand corner of the type; the letter D has a square top and pointed lower portion; the letter E is formed of a segment of a circle with a central projecting tongue; the tongue of the letter F is on an upward incline; the letter G is the reverse of the letter C, with the addition of the usual cap on its lower portion; one bar of the letter H is longer than the other and the cross-bar is inclined; the two inclined bars of the letter K come to a point in contact with the vertical bar; the letter M is slightly spread and one of the bars is slightly longer than the other; the inclined bar of the letter N extends beyond the left-hand vertical bar; the lower arm of the loop of the letter P is inclined; the

loop and the inclined bar of the letter R form a point which is in contact with the vertical bar; the letter S has an open upper loop; one arm of the letter V is slightly curved and the other straight; the right-hand bar of the letter Y extends uninterruptedly to the base, and the diagonal bar of the letter Z is curved.

Of the "lower-case" letters, the letters c, e, i, j, k, o, p, s, v, w, x, y, and z are substantially similar to the corresponding upper-case letters; the letters b and d have loops just touching the vertical bars; the letter h has a loop extending below the vertical bar; the letters m and n have similar terminal loops, and the letter u has an open loop projecting above the vertical bar.

Of the numerals, the open upper loop of the 2 has an upwardly-inclined termination and the lower loops of the 3 and 5 have downwardly-inclined terminations; the loops of the 6 and 9 do not touch the main bars, and the bar of the 7 is curved.

I claim—

The design for a font of type, substantially as herein described, and as shown in the accompanying typographical impression.

In testimony whereof I have signed my name to this specification in the presence of two subscribing witnesses.

WM. W. JACKSON.
