PRINTER! SPARE THE BOOK.

BY THOMAS MACKELLAR.

Printer! spare that book!
Cut not a single leaf!
You know not half the pains we took,
Or you'd regard our grief.
For many a thoughtful hour
We cull'd our fruitful brain
To set before you type and flower
All strung on beauty's chain.

Printer! spare that book!
It is our fancy's pet:
Turn gently o'er its leaves, and look
How tastefully 'tis set!
There's learning in its page!
There's humor in its lines!
And there the wisdom of the sage
With poesy combines.

Printer! spare that book!
Make it your office Pride,
And keep it in a cherish'd nook,
Your cunning skill to guide.
When types grow old, and fain
You would your stock renew,
Send us the number and the name—
But spare the book—now do!

OLD METAL.

Old Metal taken in trade. Prices will be quoted upon application.

ACCOUNTS.

We do not open accounts for small purchases. All orders for small amounts, from parties with whom we do not have accounts, should be accompanied by the cash.

CASH.

Cash means money with order upon shipment, so that goods can be charged to cash.

CREDIT.

Credit will be given for a reasonable amount to any one giving satisfactory reference or good security. If you are not known to us and wish credit, always send references or name security.

COMPLAINTS.

We earnestly request our patrons to report to us all cases of dissatisfaction, as we are anxious that all our dealings shall be satisfactory to our customers.

DAMAGED GOODS.

Refuse all goods delivered from express or freight in a damaged condition, or sign for them as in bad condition and claim damage from carrier.

ESTIMATES.

Estimates furnished in detail for newspaper and job offices or binderies. When asking for estimate state amount of money the selection is to be limited to.

REMITTANCES.

Remittances for large amounts should be made by drafts on San Francisco, or enclosed in registered letters, and for small amounts either P. O. money order or W. F. & Co.'s money order.

PAPER STOCK ESTIMATING SIMPLIFIED.

PRICES OF 1,000 WHOLE SHEETS OF PAPER.

THE EXACT COST OF STOCK WITHOUT FIGURING THE QUANTITY.

BY W. W. WHITE.

This book contains prices of 1,000 whole sheets of paper of any weight to the ream, from 10 pounds to 150 pounds, at any price from three cents per pound, varying an eighth of a cent per pound to twenty-five cents per pound, and examples for quickly estimating; an Ames Card and Paper Scale; Wright's Tables of Comparative Sizes and Weights of Flat and Writing Papers, Book, News and Manila Papers, and one of the author's tables for calculating book work paper; also an envelope table for figuring the cost of envelopes.

It is a book which should be in the hands of *every printer who estimates*—the correctness of the work doing away with possible errors in this branch of estimating.

Mailed or delivered anywhere upon receipt of net price, \$5.00. For sale at this office.

BRONZER—Elm City.

The most perfect device for bronzing in the market. Receives the bronze in a cavity on top (which is closed tightly with a slide), and delivers it through valves, which are opened or closed by the thumb-screw at one end, and which regulate the flow of the bronze on a sieve in the midst of a fine beaver fur. No bronze escapes except on the work being done, and a large percentage of the bronze wasted by the old method is saved, as the bronze is fed only as fast as wanted, and just where wanted on the work, and not over the whole table.

HALF CASE FOR BINDERS' CABINET.

6	Cases, ½ size	\$ 9.00
10	“ ½ size	15.00
15	“ ½ size	19.00

These Cabinets are made of the best seasoned Cherry, highly finished, and the Cases are ornamented with bronze handles. They are made of different sizes to suit the wants of purchasers. The price is low enough to be within the means of every bookbinder, and at the same time to be consistent with good workmanship and the best material. They are compact in form, and the sizes such as will readily admit of their being placed on a table or stand out of the way, and yet convenient for use.

WOOD TYPE CABINET CASE.

CABINETS—Galley.

These Cabinets will hold a large quantity of matter in a very small space. They are very handy for standing matter in a job office, and indispensable in book and newspaper establishments. They will take in any galley not over $8\frac{3}{4}$ inches wide.

Cabinets for 20 Gallies	\$ 8.00
“ “ 30 “	11.50
“ “ 40 “	15.00
“ “ 60 “	22.00

CABINETS—Mailing.

In this Cabinet we have provided in the first place, a table 3 ft. square where one person can stamp names on the papers or wrappers and still leave room for doing up the bundles or handling the papers in single wrappers. One-half of this table lets down out of the way when not in use, leaving the cabinet but 18 inches wide. Under the table, on the right side, slides have been provided to hold 44 galleys, each of which will hold from 75 to 80 addresses, thus accommodating a mail list of over 3,000 names.

THE MAILING LIST CABINET..... Price, complete, \$20.00

ELM CITY CARD CUTTER.

ACCURATE IN WORKING. MADE OF BEST MATERIALS.

CUTS A FULL SHEET WITH A TWELVE-INCH BLADE.

This Cutter is so made that with the 12-inch blade a full sheet of card board may be cut on it—the sheet passing below the shear joint on the outside and above on the inside, and by the use of the adjustable gauges accuracy is insured. Being made of the best materials they are durable, and, considering the price, the cheapest Cutter made.

Elm City Card Cutter \$12.00

THE EAGLE CARD AND PAPER CUTTER.

HANDIEST MACHINE EVER PUT IN AN OFFICE.

With Automatic Binding Clamp to firmly hold sheets. Cuts cards, paper, light metal, etc. 24 $\frac{1}{4}$ inch steel blades and solid iron beds. Large enough for all work, as it cuts over 24 inches. By cutting narrow way first all size sheets may be done, and for small work it is perfectly adapted by simply changing the gauge bar to center of bed. Paper may be cut as well as card board, about a dozen sheets at once, as the binder, traveling just before the knife, clamps the sheet firmly while being cut. Thus moderate sized lots may be got out quicker on this handy little Bench Machine than on a cumbersome power cutter. For trimming pamphlets, after folding or binding, the Eagle is perfection itself.

Eagle Card and Paper Cutter, boxed \$12.00

COPPER ALLOY TYPE

BOSTON CARD CUTTER.

A FIRST-CLASS CUTTER AT MODERATE COST.

THE GAUGE IS EXACT AND RELIABLE.

These machines are made in a thorough manner. The upper knife is curved, and is made of the best steel, and balanced. The frame is of iron, and the table of hard wood, which is the best surface for moving paper over easily. The front gauge is positive, easily set, and accurate, being controlled by a rack and pinion, which holds the gauge exactly parallel with the knife. It has a reversible iron back gauge, extending 28 inches from the knife, and a side gauge, which may be placed in three different positions on the table according to the size of the work being cut. No clamp is required with this cutter, as it has a drawing cut, which keeps the sheet straight. Sheets or strips of any length can be cut, as the standard holding the upper knife has an offset, allowing the inside strip to pass over it and the outside strip under it.

CASES.

HARRIS RULE CASE.

(Saves time, labor and rule.)

In the Harris Rule Cases, the rule cannot fall flat, and is always face up, even if only one piece is in a compartment. Each compartment is plainly numbered and made to take only the length indicated—a 9½-em pica will not go into a 9-em compartment—preventing mixing of the rule. The partitions are made low, so that the brass can be easily grasped. No space is wasted in the Harris Rule Case, and there is room provided for a large proportion of the smallest lengths—the most valuable part of a font. It takes much longer to trim one 1-em length than a 20-em length, and not one man out of ten can get the 1-em piece square at that. As each Harris Case is only one-quarter the size of a full size case, the compositor can put it on his cap case, or on the stone, or on his galley rest, without inconvenience.

CASE STANDS.

THE EUREKA JOB STAND—FRONT AND BACK VIEW.

Price of Stand\$14.00 | Complete with 55 Cases..... \$55.00

The Eureka stand is a printing office in itself. It holds fifty-five cases. All cases draw out from back of stand. It has our new recessed galley, 9x70 inches, which may be used as a standing galley or for ptying matter.

CASE STANDS—San Francisco.

Price, with 31 Cases \$40.00
 Price, without Cases..... 10.00

COPPER ALLOY TYPE

CASE STANDS—San Francisco.

The foregoing view shows the job compositor's side of the stand, which contain fifteen full and fifteen two-third cases. It also shows the broad galley, size 14x60 inches, which gives as much room as a galley-top cabinet. This may be used as a dead galley, or as a galley-rest for live matter. The stands are made but twenty-one inches in width, thus being lighter, and occupying less floor space, an important consideration where heavy rents rule. The projecting brackets save, on a double stand, three feet of floor space.

CASE STAND.

“OUR OWN” BOOK STAND.

This Stand, which was originated in our San Francisco Branch, has been the most extensively copied of any article in the trade. It is sold by every Eastern manufacturer under the name of the “City” Stand, and with slight changes, and iron brackets in place of wood, becomes an “Autocrat,” a “Boston,” a “Success” or a “Polhemus,” according to the fancy of the various manufacturers. It possesses many points of advantage, such as sliding lower-case, galley tray, handy upper-case, economy of space, etc. Cases can be arranged to draw out from front or rear. Paneled ends or outside runners added at \$1.00 for each end.

Price, without Cases\$10.00

CASE STANDS.

THE AUTOCRAT CASE STAND.

This is a Printer's Stand or Frame, in simple, compact and convenient form. The prominent feature is the GALLEY TRAY under each lower case, adapted from "Our Own" Book Stand, where the compositor can empty his stick by simply pushing the lower case up sufficiently to expose the galley, after which the case is drawn back to its place.

Each Stand will accommodate two pairs of news cases, fifteen full size job cases and six news galleys. On the deck or top, back of the brackets, there is also a large space, which may be utilized for sort drawers or for more galleys.

COMPOSING STICKS.

PERFECT NEWS STICK—No. 1.

No. 1—Malleable Iron, milled, 13 or 13½ ems pica.....	\$0.75
One depth only— $\frac{2}{4}$ inches.	

No greater nuisance exists in a newspaper office than imperfect composing sticks or composing sticks not accurately set to the measure of the column. The imperfections cause unnecessary trouble in locking up and often tend toward disaster to the forms.

Style No. 1 is made of malleable iron; the handle and under side are japanned so that the stick cannot rust; the pan itself is milled out, the sides being absolutely square and rigid, and altogether the stick is as perfect as could be desired.

COMPOSING STICKS.

PERFECT NEWS STICK—No. 2.

- No. 2—Steel riveted, 13 or 13½ ems pica\$0.75
 No. 2—Aluminum, rounded handle, 13 ems only 1.25

Style No. 2 is made of the best of steel, and the set bar or knee is riveted firmly to the bottom and back of the stick. It is accurate in every respect. Both styles are made for 13 or 13½ pica and 2¼ inches deep.

BOSTON COMPOSING STICK.

- Malleable Iron (milled and steel-riveted)\$0.75
 13 ems measure, 2¼ inches deep.

This stick is made of malleable iron, milled and steel riveted, is 13 ems pica in measure and 2¼ inches deep. The peculiar shape of the handle makes this stick one of the easiest known to the newspaper compositor. It is fitted perfectly to the hand, and does away with all lameness of the wrist, resulting from a stiff, awkward handle.

STANDARD-GAUGE SETTING STICK.

Price, \$1.50 each.

One of the handiest little tools in a printing office. Every job compositor ought to have one on his make-upstand. It will be found useful in measuring leads and rules, in laying out work, in setting try lines, and it makes distributing pi a real, genuine pleasure. The Gauge is standard Pica ems, and has the ems cut to 10 picas. Every fifth em is stamped with its length.

COPPER ALLOY TYPE

COMPOSING STICK HANGING RACK.

For 25 Sticks, \$1.00; for 50 Sticks, \$1.50.

An article of prime necessity in a well-regulated job office, and saves lots of time usually spent in hunting around for sticks. It is to be fastened to the wall. Any size of stick, large or small, occupies a space of one inch. Pass the bottom of the stick through the slot, letting it hang by the outer flange. More sticks are destroyed in an office by throwing around than by use. The racks are made from two pieces firmly glued with grain crossed to prevent breaking off. Made to hold twenty-five or fifty sticks. Odd sizes to order.

DRYING RACKS—Interlocking.

With these Racks sheets are taken direct from the fly, and may be stacked ceiling-high in a perfectly straight and rigid pile, which cannot be knocked over by accident, and with no more weight on the bottom than on the top sheets. This pile is a most effective drying room, occupying only the floor space of one rack, and from the time the sheets are fed into the machine until ready for shipment they need not be handled. Each Rack is firmly locked on its neighbor, but each slides with ease on the rack immediately below it. They save handling, all the time of that operation, and the consequent waste of paper through offset, smearing, finger marks and tearing. In many cases these Racks save expensive slip-sheeting. They circumvent electricity by receiving the sheet direct from the fly. They ensure evenness of temperature, and thereby assist in getting a perfect register on lithographic work. They save seventy-five per cent. of floor space over any other method of drying sheets, and from one to two per cent. of paper, and a vast amount of time.

Per set of six, assorted.....\$2.00

COPPER ALLOY TYPE

ENGRAVING SUPPLIES—Hoke Chalk Process.

PLATEOGRAPH.

By the use of this machine any one can engrave upon the plates without any previous training whatever. By simply following with the tracing point of the machine the lines of the photo or picture to be reproduced, a reduced or enlarged copy, as may be desired, is engraved upon the plate by the cutting point. Our purpose in making the machine is especially to help those who cannot draw with facility; but it is also a great assistance to the expert artist and engraver, enabling him to save much valuable time and labor. They are made wholly of polished metal, accurately graduated, and have improved cone bearings for taking up all wear and lost motion.

Price in brass, nickel plated\$12.50

Write for full description of how it works.

BULB BLOWER.

This tool is a great convenience to the artist. The soft rubber bulb is held in the left hand and the hose connecting it with the hollow handle of the engraving tool is passed over the neck of the operator. A slight compression of the bulb forces a current of air through the handle of the tool, removing all dust as fast as it is cut.

Price\$1.00

STEREOTYPE CASTING BOXES.

No. 1 Box. This is for amateurs or those using only small cuts. It casts any size of plate up to $3\frac{1}{2}$ x5 inches; it casts thin only, for mounting on wooden bases.

Price, with Bars and Clamps complete.....\$9.00

No. 2 Box. This will make a cast of any size plate up to 5x8 inches, either low or type high, according to gauge bars used. This is the box for ordinary job or newspaper work.

Price of Box with Clamps and one set of Gauge Bars (either type high or thin\$16.50

Unless otherwise ordered, regular type high engraving plate bars will be sent.

No. 3 Box. This will cast any size plate up to 8x10 inches, and is operated in the same manner as No. 2, possessing all the good features of the latter, while doing larger casting.

Price, with Clamps and 1 Set of Gauge Bars (either high type or thin)\$22.00

Extra set of No. 3 Bars (any kind)..... 5.00

Extra set of No. 2 Bars (any kind) 3.50

ENGRAVING SUPPLIES—Hoke Chalk Process.

SHOOT BOARD.

Combined Shoot Board, Plane, Miter-Box, Clamp and Saw.

The plane runs in a grooved bed at the right-hand end, in the usual manner. A slot in the elevation at the back of the board forms the front bearing for the saw, and two pins dropped into conical holes form the rear bearing. When not being used the pins are removed. The clamp slides in a dovetailed groove, and, by means of a winged set-screw, clamps the block while it is being sawn or routed with chisels. During routing a piece of mounting wood is placed in front and rear of cut to prevent the chisel coming in contact with the iron. The plane is used for smoothing and squaring the edges of the cut.

The board and plane are entirely of iron and steel. Size of bed, 16x16. Price, with plane, saw (26 in.) clamp and pins, complete, \$22.00
Shoot Board, Sordinary kind, 11x16, with one plane, price. 16.00

COMPLETE CROWN PLATE OUTFITS.

No. 1 Special outfit consists of the following articles: one patent No. 1 stereotyping box with one set of low gauge bars, two clamps and two handles, complete. One 5-inch ladle, one 6x14 inch mitre box (wood), one 16-inch back hand saw, three routing chisels, one set (3) engraving tools, one scraping brass, one sample engraved plate, one sheet tracing paper, one hammer, one box of brads, one brad awl, one piece of mounting wood, one No. 1 stereotype beating brush (finest quality of bristles), one-third dozen of our prepared matrix mats, 12x19 inches, one-fourth dozen 3x4 Crown Engraving plates, and three pounds stereotype metal. Weight, about 40 pounds.

FOLDING MACHINES.

THE BENNETT "ECONOMICAL" FOLDER.

This machine is carefully, strongly and neatly constructed, of good material, is very light running and comparatively noiseless in operation, requiring only one-sixth horse power to operate. All adjustments are positive and simple. Has delivery at third and fourth folds, and can be changed without stopping machine. Has pasting and trimming attachment for eight (8) page work. Built in hand-feed, or attachable to any cylinder press, front or back delivery. All journals are of tool steel, with journal boxes three diameters long, hung in self-adjusting pivot-hangers, making it possible to remove any fold roll, driving or rock shaft in a few moments and replace in line, and there is not a gear on the machine but can be reached conveniently and removed easily. All adjustments are made by screw, each tape tightened independently, drop of fold blades can be regulated by the "turn buckle" adjustment to 100th of an inch. There are side guides to insure accuracy in folding, whether a sheet comes from a press or feed board.

We do not make any extra charge for press fixtures in attachable machines except for front delivery press.

Price for 32x44 (6 col. quarto) or 35x50 (7 col. quarto) \$240.00

GALLEYS—Lead Distributing.

LEAD-DISTRIBUTING GALLEY.

The purpose of this Galley is indicated by its name. It is a half-rimmed wood galley, with a printed scale on its face covered with glass. The lines are just a pica apart and are plainly numbered from one to sixty, each fifth line and number being more heavily printed than the rest, as shown in the cut. The leads, slugs or brass rule to be sorted are laid edgewise on the Galley across the lines, which register at once their respective lengths. A galley full is quickly distributed by removing successively the longest lengths. Worth its weight in gold to any office.

Price, each.....\$1.50

GALLEYS—Heading.

GALLEY REST AND RACK.

COMBINED GALLEY REST AND RACK.

It will be seen that the Rest can be detached from the Rack for use on front of case, for placing galley upon when correcting. By this arrangement every box in the case is accessible, saving much time. It prevents breakage and injury to type, and as water from wet galleys drips on the floor, it keeps cases always dry and clean.

These rests are sold separately, for use simply in correcting, or with necessary castings for attaching to end or back of stand, or against a wall, to suit the convenience of the compositor.

INK FOUNTAINS.

The size of this Fountain makes it practical to use expensive ink without waste, only a small amount being required to fully supply the fountain. The bottom is so constructed as to permit all the ink to run down to the roller, there being no pocket or dead space. This fountain can be interchanged from one press to another without removing the attachments—so that by having two or more fountains the color can be changed without wasting the ink, which must occur if one fountain has to serve all colors. The roller can be removed for cleaning by turning back the thumb-screws until the caps can be removed through the slot in front, then by raising the roller it will come out through the same slot.

THE BUCKEYE INK FOUNTAIN.

Price, f. o. b. factory.....\$10 00

CHANDLER & PRICE—REGULAR.

Price, f. o. b. factory.....\$20 00

This Fountain is so made as to permit contact with the whole length of the roller, and will thus furnish a greater supply of ink than a fountain feeding only to part of the roller.

LABEL HOLDERS.

Price, 1x5½ inches, per hundred.....\$2.75

By using the Brass Label Holders and labeling type cases properly a most uniform and harmonious effect is produced. The composing room becomes neater and more attractive to visitors as well as to employer and employees. The compositor is kept familiar with the various faces of type in the office—especially those only occasionally used—and is greatly facilitated in the selection of lines; a great help to new compositors, and much time, labor and patience are saved in both composition and distribution.

LEAD AND FURNITURE RACK, SURPLUS.

Keeping the surplus material in an office has always been a vexed problem. Of several of the sizes of leads you have many more than your regular lead rack will accommodate. Sets of furniture for a special form are cut from time to time of some odd size not provided for in the furniture cabinet, and when the job is complete, there is no place to keep them. We have here just what is needed for this purpose. This rack consists of a shallow box with twenty movable slides, marked A (see small cut), to which the ends B B are permanently attached. The strip C, which forms the back of the pigeon hole, is to be fastened in position to suit the material you wish to place in it. When filled, stamp the length in pica ems on both top and bottom on the end of the strip B. Place the smallest size on the left, and increase toward the right. The slides, being movable, intermediate sizes can always be placed in correct position. Place the rack so that the top inclines back, to keep material from falling out. The rack here shown is 30 inches high, 24 inches wide, and 6 inches deep. Any size made to order.

LAMP HOLDERS.

CHALLENGE.

The above illustration represents our Lamp-Holder, a most convenient and safe attachment for holding a lamp over the compositor's case. It will be readily understood by reference to the cut that the fount-holder A can be instantly raised from C to B, as shown by the dotted lines, to adapt the position of the light to suit the compositor. Small sprockets at the top of B and C, with suitable recesses in A, retain the light in any position desired, perfectly stationary.

Price75

LEAD AND SLUG MOLD—"Perfect."

These cuts represent a mold for casting 3-point leads and 6-point and 12-point slugs. No office, especially any outside of the large cities, should be without one. With a little practice anyone can cast good leads and slugs. The cost of leads and slugs is so high and the waste so great from constant cutting in job work that but few offices have an adequate supply, and hence much time is lost in "picking" and patching by compositors. Most offices have plenty of old type metal and electro or stereotype plates of little value, which can be utilized by the aid of this mold, and can be made into those indispensable adjuncts to job and newspaper work—leads and slugs of standard sizes. This mold is made in our own foundry, by the best of workmen, and is reliable in every way. It will save its cost in a few hours.

LEAD CUTTERS.

LITTLE GIANT LEAD AND RULE CUTTER.

Six-point rule may be cut on Nos. 1 and 2, and 10 point rule on Nos. 3 and 4, and for lead cutting it has no superior.

The back gauge is reversible; while the bed on a No. 1 Cutter is only 8 inches long, a rule may be cut 12 inches long. The front gauge is for cutting narrow pieces of lead or rule rapidly.

Leads should be cut on the front section of the bed and brass rule on the rear section only. When cutting rule the *bottom* of the rule should be placed against the ridge in the center of the bed.

The sectional view shown here gives such a clear idea of the new gauge as to render any extended description unnecessary. Narrow slots are made in the bed of the cutter, and the adjustable gauge is provided with a tooth fitting the slot and rendering it impossible for the gauge to slip.

LEADER BOX—May's Patent.

The box occupies just one-half of the lower case "e" box, and utilizes all space of case partitions etc. While it appears, and is small, its peculiar construction admits of its holding nearly as many leaders as the big, awkward cigar box. With the aid of two steel points on the under side, and the two arms which drop against the partitions of the "k" and "l" boxes, it is held so firmly in position that it is impossible to remove it without lifting the side-arms.

MITERING MACHINES.

WESEL "SUCCESS" PATENT UPRIGHT MITERER.

In this machine, the cutting head having no sidewise motion, the knife will always shave as much from the bottom as from the top of the rule. The cutting head is regulated by set screws. The smallest piece of rule can be shaved without a clamp or any other device.

The machine needs no fastening to a bench. It is mounted on a rimmed wooden platform to catch all the shavings, and can readily be moved to a stone, table or case. The platform is also provided with an emery board on which any burr can be rubbed off promptly.

The micrometer gauge (extra) enables the operator, through its extremely accurate gauge combinations, to shave a piece of rule exactly to point system.

MONARCH NUMERATOR.

Triple Action, Steel Wheels, for
Duplicating, Repeating and
Consecutive Num-
bering.

In introducing this numbering machine at such a greatly reduced price, we distinctly wish our patrons to understand that the article is not in any manner inferior to other machines; on the contrary they are improved, from the fact of changes having been made in our new Monarch as follows: The attachments for changing the different actions for numbering have been simplified to prevent any mishap through inexperience in operating. The inking attachment is entirely new, having a more direct and straight action of the ink pad to the figure wheels (patented), also being more compact, producing a lighter, stronger and easier-working machine. The frame and wheels are of steel, highly finished and thoroughly nickel-plated.

The important features of this machine are the simplicity of its construction and the direct action of its working parts, especially the process of inking, which is done by the same method as is used on the ordinary numbering machines

The Monarch is the simplest machine extant, without complicated attachments to be continually getting out of order.

We keep in stock the styles and sizes of figures shown in margin. Special styles made if desired, at slightly advanced cost. Be sure and designate style of number desired.

Each machine in wood box, with a bottle of ink, red or blue.

PAPER CUTTERS.

PARAGON CUTTER.

Cuts $2\frac{1}{2}$ inches thickness of paper. Squares 14 inches. This handy little cutter will be found very useful in all Job Printing Offices. It will effect a great saving of time and labor in the cutting of small work, such as labels, bands, circulars, cards, etc. Avoid the trouble and expense of having the knife of your larger cutter ground so often because of the little space in the middle of its cutting edge getting dull from use on small jobs. A very desirable feature is the ability to gage and cut accurately very narrow jobs. It is a well built and substantial machine, made entirely of iron and steel, and will sustain the well earned reputation of the Paragon.

Price, F. O. B. San Francisco..... \$50.00

No. 7 ..	9 " " ..	35 x51.....	31 x47.....	325.00

Price includes one wrench, one pair bearers, and one extra frisket. Extra bearers, per pair, 50 cents. Extra frisket, \$3.50 to \$6.00.

DIRECTIONS FOR SETTING UP.—After setting the frame upon its legs and putting on the ribs and bed, lay the platen on the bed, placing under it two bearers about type high, then run in the bed so as to bring the platen under the spring rods and screw them fast to the platen, after which put in the bar-handle, standard and lever. Turn the nuts on the suspending rods so as to compress the springs just enough to give the platen a quick retrograde motion, observing at the same time to get the surface of the platen parallel with the surface of the bed.

After having put the press together and leveled it, be particular not to raise the end of the ribs by the gallows, but let it go under loose, which will have a tendency to make the bed slide with more ease on the ribs.

 See that the different parts of the press are well oiled before starting, and do not take a pull until the bed is completely run in to its place.

These prices include both steam fixtures and fountain complete. Gross weights, from 150 to 300 lbs. heavier than Style No. 1.

WITH OR WITHOUT “DWELL.”—Our No. 1 and No. 2 presses are furnished with connecting rod cams, which produce the platen dwell so desirable when careful feeding and accurate register are required. When customers do not want a platen dwell the press is furnished without cams—if so ordered. When made without cams the platen has nearly a horizontal position when receiving the sheet, which is desirable in some kinds of work.

STYLE NO. 3.

No. 3 presses are made as follows:

- 3A—For wood printing only.
- 3B— “ book cover inlaying only.
- 3C— “ letter press printing only.
- 3D— “ all styles of printing, as above.

Prices, F. O. B. factory with steam fixtures and fountain:

Steam Blanks for hot work, extra.....	50.....	60.....	70
Gross weight	2,200 lbs.....	2,900 lbs.....	3,200 lbs

This press is especially intended for wood printing (any thickness of board), inlaying book covers (occasionally termed case printing), hot or cold stamping or embossing, and the finest and heaviest classes of cut and solid tint printing. Any one of these presses may be adapted for a single purpose or for a combination of uses.

When ordering these presses, state what kind of work is to be done, and if for wood printing, *state what will be the THICKEST board* necessary to print. To accommodate the work to be done the platen is set back from type-high from $\frac{3}{4}$ to $1\frac{1}{8}$ inches, according to order. Any intermediate thickness can be printed.

SPECIAL POINTS.

THE IMPROVED UNIVERSAL PRINTING PRESS returns to its owner and operator the maximum of results for the minimum of expenditure.

This assertion cannot be successfully contradicted, being based upon the FACT that it stands unrivaled in possession of the following combined essential advantages:

Great power of impression, with an absolutely *rigid* bed and platen.

Direct platen motion, giving equal pressure upon all parts of the form.

Throw-off and platen adjustment in one combination of parts. *No alteration of corner screws or tympan* when changing jobs, light or heavy.

Roller carriage stop, retaining the rollers upon the cylinders upon the will of the operator.

Ink distribution adaptable to any quality of work to be executed, and equal to that of the best stop cylinder press.

To the PROGRESSIVE printer the IMPROVED UNIVERSAL offers new possibilities in the production of the highest grades of work at the largest amount of profit.

PRESSES.

EMBOSSING MACHINE.

A machine built only for *very heavy* embossing and book-cover stamping (“smashing”), and has no inking apparatus whatever.

The following memoranda of its dimensions and principal features will give a fair idea of what the press is capable of doing:

Press is “double geared”—that is, has a gear wheel on each side of frame—and each wheel is let into and is flush with the sides of the bed. These gear wheels have steel sections welded into their periphery, and in said sections are formed the teeth which withstand the strain of the impression. The main or crank shaft is steel, with solid reamed bearing through the bed. The driving or pinion shaft is steel. There are two fly-wheels, one on each side of press, *each* wheel having 400 lbs. of iron in its *rim*, or 800 lbs. in both, for very powerful impression, revolving eight and a quarter times to each print. When open to receive the sheet the platen is thrown back nearly to a horizontal position. Although the bridge and platen of this press weigh about 900 lbs., the machine may be operated at any number of impressions per hour with perfect smoothness and safety. The steam blank is secured to the face of the bed and may be arranged for *super heated* steam, if desirable—as in very heavy crushing of hard and unyielding material.

This style is built in two sizes, with or without a stop motion. The stop motion operates automatically without stroke or jar, stopping and starting the platen as desired while the fly-wheel continues in full momentum, thus giving any required time for accurate pointing or placing the sheets without losing the force of a quick impression.

The prices of these machines are as follows:

21½×22 bed plate, f. o. b. factory	\$800 00
24 ×26 bed plate, “ “	900 00
Steam Blank, extra, “ “	\$80 00 and 90 00
Stop Movement “ “	100 00

Special catalogue sent upon application.

PRESSES.

STAMPING AND PAPER-BOX CUTTING AND CREASING MACHINE.

Early in the year 1876 the first printing presses adapted to the work of cutting and creasing pasteboard for boxes were made by M. Gally, since which time he has placed a large number in most of the paper-box manufactories of the United States. His present press, for this purpose, is his latest improvement, and is the largest and most powerful machine ever produced for this kind of work. Having the improved platen movement of the "New Universal," remarkably simple, and being solid in its build, it is peculiarly adapted for either stamping or paper-box cutting and creasing.

The construction of this machine is substantially the same as the embossing presses. It has a soft steel plate, screwed to face of platen, and the face of this plate is set .9185 inches from and parallel to the face of the bed.

This machine is built in three sizes, as follows:

22½×30, f. o. b. factory	\$750 00
23½×31 " " " "	900 00

Larger sizes to order.

Above prices include skidding and crating of parts and delivering on board cars or boat at manufactory, Hartford, Conn.

Gross weight, complete, for domestic shipment, No. 1 machine, 4,500 lbs.; No. 2 machine, 5,000 lbs.

The American Type Founders' Company are special agents for the sale of the Gally presses. The best prices and terms can be obtained through the branches of that company. Special attention is paid to orders for machinery.

PRESSES.

COTTRELL PATENT AIR SPRING COUNTRY PRESS—NEW SERIES.
(See opposite page.)

PRESSES.

PATENT AIR SPRING COUNTRY PRESS—THE “TRIUMPH.”

NEW SERIES.

The illustration on opposite page shows the latest improved Cottrell Country Press—new series. It is adapted to printing newspapers, posters, pamphlets, circulars and all classes of commercial printing. This machine has been thoroughly remodeled and reconstructed; special attention has been given to the design and to the proportioning of all the parts to the work required, making a strong, simple and rapid machine.

The side frames are changed in design, the flanges projecting inward, the whole presenting a smooth, massive and cleanly appearance. The press is supplied with the patent air springs, the resistance of which is increased or decreased according to the speed of the press. It is well known that the faster the speed the greater strength of spring is required; the patent air spring covers these requirements. If the press is running at five hundred per hour, the spring can be easily regulated for that speed; and if running at one thousand per hour, the proportionate increase of spring can be obtained, and so up to the highest speed of which the press is capable. The air spring is provided with an automatic throw-off that releases the spring when the press is stopped, and the pressman can move the bed to and fro without compressing the air; when the press is started the spring is applied automatically.

The patent hinged roller frames permit of the form rollers being instantly uncovered for removal or other purpose without unscrewing the sockets. The rollers can be taken out and put back without changing their set. The well fountain is used, being easily regulated and cleaned. It is set high, giving easy access to the form. The distribution is ample; two three-inch rollers cover a full form. The bed has four supports while under the impression. This is important, as a clear, even impression can be taken without overlaying the form. The shoes, tracks and roller are of hard steel. The gearing is accurately cut, which, together with registering rack and segment, insures perfect register. The fly is balanced, laying the sheet gently on the pile table.

The whole machine is substantially built, simple in construction; can be set up and run by any printer, and by the aid of the patent air springs will run one-third faster than any other country press.—*Manufacturers' Circular.*

PRESSES.

COTTRELL MONARCH PRESS.

For a certain grade of offices who do not wish to be considered country printers, and yet want a machine that shall be constantly employed and produce a good grade of work, we recommend the Monarch Press. It has many advantages and improvements, including patent air springs, patent tapeless delivery, back-up and hinged roller frame, geared sliders, iron steps and feeder's stand, and is the best press which can be made and satisfy the consideration of low price.

It is a press of excellent design, of the best materials, of high speed, but by manufacturing them in large quantities and building but two sizes, we are enabled to make the price within the reach of the printer of moderate means.

The Monarch was designed and is sold in competition with the lower grades of presses of other manufacturers, but easily outclasses all other presses which claim the consideration of a reduced price.

It is fast—1,700 an hour for the No. 5, and 2,000 for the No. 3. There are four bearings under the bed, steel tracks and slider rolls, heavy flange on the ends of the cylinder, and, coming between the Country and Job and News, is an extremely popular machine.—*Manufacturers' Circular.*

Table distribution, \$75 additional, f. o. b. factory.		

PRESSES.

COTTRELL JOB AND NEWS PRESS—THE "PARAGON."

In construction and finish the Job and News Press resembles our first-class extra heavy machine, but is simpler and can be run by any person capable of running a country drum.

The design is handsome, compact and solid, being perfectly smooth on the outside and easily kept clean, and being constructed with few working parts, sets nearer the floor, making it easier to handle and feed than the average drum cylinder.

Its mechanical construction is very complete. It has a solid bed-plate, or foundation with cross-girt, cast solid in one piece. To this superstructure are bolted the side frames and standards supporting the ribs and two centre-bearing wheels, which, in connection with the slider roll tracks, give four bearings underneath the impression. The end of the cylinder is flanged, giving additional stiffness.

The material is of the very highest grade of special iron, and all gears and small wearing parts are constructed of gun metal, giving a wearing capacity equal to any press manufactured.

Our patent tapeless delivery, with all its advantages of handling the sheet without smut or dirt, is an essential feature.

Our patent improved air-springs, with vacuum valve, are used on this machine, and a full form of type can be run at a speed of 1,650 per hour with but little or no jar or vibration. We use a well fountain, which will use every particle of ink without waste. It can be easily cleaned when changing from one quality of ink to another. The machine is provided with hinged roller frame, iron steps and feeder's stand, our patent geared sliders, for preserving unity of travel between the bed and sliders, balanced fly-wheel with continuous fly cam, patent micrometer feed guides, double tympan rods, gibs for holding down the bed, flanged ends to the cylinder, all of which go to make up the solid, speedy, convenient and easily handled machine.—*Mfrs. Circular.*

COTTRELL TWO-REVOLUTION PRESS—NEW SERIES—FOUR ROLLERS.

(See opposite page.)

COPPER ALLOY TYPE

PRESSES.

COTTRELL TWO-REVOLUTION PRESS—NEW SERIES.

The engraving on opposite page represents a Two-Revolution Press of our new series. This machine has been entirely reconstructed and strengthened throughout, and many of the mechanical arrangements greatly simplified. This reconstruction and entire change of design and patterns enables us to present to the trade a machine exceedingly simple in its construction, as a glance at the cut will show, yet embodying all our patented improvements, in which we have always kept the lead, and which have rendered our presses so justly popular.

The bed runs on four steel tracks upon hardened steel rollers, the rollers being ground to exact size by special machinery. All of the four tracks are supported in direct line with the impression upon standards raised from the girt, the girt itself being cast solid with, and a part of the bed-plate. A great advantage in this construction is the economy of time in making ready, as the heaviest impressions in cut forms can be worked without the least possibility of spring in either tracks or bed.

Our patent air-springs, with which this press is equipped, and which have been one of the distinctive features of the Cottrell press for so many years, make the machine almost noiseless in operation, and the accurately-cut gearing, together with our patent attachment for controlling the momentum of the cylinder, insures perfect register. This machine has a power backing-up motion, and a trip, enabling the operator to throw off the impression at will, or to roll the form any number of times.—*Mfrs. Circular.*

COTTRELL TWO-REVOLUTION PONY—NEW SERIES.

The Cottrell Two-Revolution Pony is the latest arrival in the printing world. It comes equipped with every appliance and improvement for convenience of operation—including trip-at-will and back-up. In proportion to its cost it is the quickest money-getter that has ever been erected on the floor of an American pressroom.

The popular size is 25×30 on the bed (between bearers). This hustles a 22×28 sheet as it never was moved before. Remember, the press is built with a stout bed-plate, and does not stand like a chair, but is firmly grounded like a steam engine. For stationers' work, insurance work, railroad or express work, for all rapid transit—and for a full "charging drawer" at six o'clock each night—the Cottrell Two-Revolution Pony is the only certain solution.—*Mfrs. Circular.*

PRESSES.

THE IMPROVED CAMPBELL COUNTRY HAND SERIES.

This press has been long and favorably known to the trade as the best, most simple, most durable, and most profitable cylinder press for the general use of a country office.

The cut shows the new machine, which is the old style Campbell "Country" remodeled, simplified, and improved with special reference to easy running by hand power.

In the new machine all of the peculiar advantages possessed by the old have been retained and new features added to them, until the press represents the nearest approach to perfection yet attained.

In simplifying, it has been made possible to reduce the cost, making the cheapest as well as the best press of this character in the market, and although especially designed for a hand-power press, tight and loose pulleys and belt-shipper can be applied at the nominal additional cost of \$15.00.

No. 2, bed 33x48, form 28x44, standard size for 9-column folio and 6 column quarto.....\$800.00

No. 3, bed 30x43, form 25x39, standard size for 8-column folio and 5-column quarto..... 700.00

Speed, 600 to 800 per hour.

The price covers everything that legitimately belongs to a cylinder press, including a rubber blanket and all expenses of boxing and shipping at the factory, Taunton, Mass.

PROOF ROLLERS.

This engraving fully represents this late production for the convenience of the craft. Its simplicity and utility is at once apparent, and the nominal price which it is furnished at brings it within the means of all printers. On examination it will be found to resemble the ordinary brayer roller, with this difference—it works on wheels. The wheels, together with a spiral leverage, raise the India rubber impression cylinder a little over the proper height for taking the impression from a galley, which is supposed to be lying flat upon an imposing stone or an ordinary table.

NOVELTY PROOF ROLLER.

Price, 9 inches between wheels.....\$5.00

PERFORATORS, ROSSBACK.

A very excellent feature of this machine is the sliding slotted plates on front of needle-bar, which enable one to easily and quickly provide for stubs of checks, etc., rendering a portion of the needles inoperative

Perforate 24 inches. \$100.00
Perforate 28 inches. \$125.00

PERFORATORS.

THE FRANKLIN HAND PERFORATOR.

This hand perforating machine we can fully recommend to be as good as any perforator made. Just the thing for binders, printers and lithographers whose trade does not warrant a larger machine. Five chicks can be perforated without turning. Table is made of oak; machine is japanned and ornamented, and is far superior in material and workmanship to the machines of other makers. It makes a round hole, the same as on postage stamps, and the perforating is large enough for any check-book. There is no taking out of needles, and in case of accident these can be replaced at very little expense. It will pay any printer to buy this machine who prints checks, clothing tickets, price marks, and such other matter as requires separating from pads or books. There is a great variety of work which a small printing office can do with the aid of this machine which would otherwise go to larger offices. It is a cheap, first-class, durable perforator. Weight of machine boxed ready for shipment, 100 lbs.

Price, to perforate 10 inches, boxed.....\$25.00

QUOINS.

THE MIDGET QUOIN LOCKED.

Smallest quoin on the market—occupies a space of 18 points by 120 points. It is a saver of time—also of money.

To say that the average printer is up to the times would be a falsity, but to say that he has not reached the goal of perfection is true. There are so many points where the craft are destined to improvement. The Midget is not an improvement, but is a thoroughly new idea. It does away with an annoyance that has been in existence from away back—that of making some forms tight by forcing in leads.

THE MIDGET QUOIN UNLOCKED.

The Midget which we have is a very small lock, and will lock up a form in a very small space. You can put it anywhere in a form. To a practical printer all this is evident—the quoin speaks for itself. You should have it in your plant. No printing office complete without it.

SOME POINTS WORTH NOTING.

Tapping it with the ever-present mallet fastens it.

It occupies no more space in length when locked than unlocked.

The proof of its safety is the fact that when locked it rests on its corresponding flat surfaces,

It can be put anywhere in a form, as the space it occupies is so small that it is not noticeable in the printed job.

Unlike other quoins, the harder the substance is it rests against, the better.

THE LITTLE WIZARD.

This handy little machine is specially designed for making graceful borders, dashes, corner pieces, word and line ornaments, etc., out of 1-point brass rule. Full directions for operating sent with each machine.

Price\$7.50

SAWS.

GRIFFIN HACK SAWS.

This Saw will cut iron, brass, steel and metals of all kinds. It requires no sharpening, as the blade can be thrown away when dull and replaced by a new one at less cost than it requires to file an old Saw. Each Saw has twelve extra blades with it.

8-inch Griffin Hack Saw, with 13 blades\$2.00

SAWS.

HOPKINS PLATE CUTTER.

The Hopkins Plate Cutter cuts the plate or matter quicker, easier and neater than it can be cut by any other method. It is simple and durable. Being automatic in its action, the cut is bound to be absolutely straight and the letters on the matter cannot be mutilated, which is so often the case with the mitre-box and saw. When in a hurry to "make up" you can with this machine cut off a plate to fit quicker than you can with the mitre-box and saw, and in less time than it would take to hunt up a "dead ad." It is always ready, being in one piece. It is valuable to job offices as well as newspaper offices, as it cuts stereotype bases, wood or metal furniture, brass rules, slugs, etc., and never makes a mistake. Aside from its utility in cutting up stereotype plate-matter, the machine is a real convenience to any printing office. There is a great deal of miscellaneous cutting, in connection with which this device works into the best advantage. The only thing to wear out is the saw, which can be replaced by us for 25 cents, and can be attached in a minute by you. The device can be operated as easily by the apprentice as by the foreman. Weighs ten pounds. It saves time and labor, and prevents that bungling and mutilating of plates which are a consequence of the present unsatisfactory method.

STAPLING MACHINES.

BREECH-LOADER WIRE STAPLE BINDING MACHINE.

Price	\$3.00
Staples. Sizes: C 3-16 in., D ¼ in., E 5-16 in., per box of 1,000 of one kind50

This machine binds papers of all kinds with wire staples; holds 100 staples at a charge; feeds them automatically; inserts them one by one into the job and clinches them flat on under side of the paper. Its capacity is from 1 to 50 sheets, and it does its work easily.

STAPLING MACHINES.

THE HERCULES BINDER—FOR FOOT POWER.

Price\$10 00
 Staples (in boxes of 5,000), per box 1 25

This machine is intended for binding pamphlets or papers that require to be quickly and cheaply fastened together by staples. It was designed in answer to a demand for a wire stapler of great capacity, at a price lower than that charged for the large and expensive machines. It is entirely automatic in its action, being "loaded" with a large number of the staples, and discharging and fastening them through the paper at one action of the lever or treadle. It will do its work well as fast as the operator can handle the sheets and work the lever, and will bind any pamphlet, from the thinnest to two hundred pages. It holds one hundred staples at a time, and will take four different sizes. Any further information relative to it will be sent on application. We carry them in stock, ready for shipment.

STAPLING MACHINES.

An indispensable machine for bookbinders, printers and stationers. For binding pamphlets of any thickness under 125 pages through the saddle.

Length under arm, 12 inches.

STAPLING MACHINES.

IMPROVED NO. 9 STAPLE BINDER.

Does heavy work with a half-inch staple.

This is the best of this series of machines, working on the same principle, but with great improvements. The new clinching device perfects the clinch equally as well as most of the high-cost steam-power machines. It stitches through the fold or through the back, and drives staples 9 inches from margin, and through a thickness of $\frac{9}{16}$ of an inch.

In the \$25.00 and \$40.00 outfits, the shutebox and mitre box measures 8x18 inches. One end is for sawing and the opposite end has a "rest" on which casts are placed when trimming off rough edges. The plane used in these outfits, is a patent iron block plane. It is a simple and easy contrivance for quick trimming.

The 8x18 outfit at 40.00, with the same plate trimmer included, as the 11x18, at \$50.00, will be furnished at \$45.00 The plate trimmer in the \$50.00 and \$80.00 outfit is 14x16 inches, with a 12-inch hand plane, that works in a groove.

TYPE GAUGE—Brass.

Price, each.....\$1.50

TINT BLOCKS—Labor Saving.

These consist of strips of engraver's maple, with polished face, cut to even picas and nonpareils in width. A font consists of two pieces each—1, 1½, 2, 2½, 3, 3½, 4, 5, 6 and 8 ems pica wide—all 8 inches long. All the printer has to do to make a tint is to set his panel to even Picas, select a tint strip of same width, and cut it the desired length.

Price, per font\$1.00

TAKE SLUGS.

10

THE ST. JOHN TAKE SLUG.

The above cut represents a useful improvement in "Take Slugs," made of brass, solid and substantial; they have bearers above and below the figures, which protect them from injury, and give a line to measure from. The hole in the center is the exact size of the type used, and when the figures become useless they can be replaced at a very trifling cost. To the foreman or compositor in the newspaper office the slug speaks for itself more eloquently than words can. Cut to any measure, 25c. each.

5

BRASS INDENTED TAKE SLUG.

This slug is made of solid brass, and is almost indestructible. The figures are plainly indented in the face of the slug, and the line to measure from is unmistakable. They are cheaper than the ordinary electrotyped slug, and preferable in every respect. Cut to any measure, 20 cents each.

ELECTROTYPED TAKE SLUGS.

TAPE COUPLER—Metallic.

The "Metallic Tape Coupler" for connecting ends of tape used on printing presses, folding machines, etc., is something new. In previous years there has been a great deal of time and energy wasted experimenting on various devices for connecting ends of tape without sewing, and at the same time have perfect register. This device will surely be appreciated by all who have had experience sewing tape, and whose duty it is to see that the registration of paper on folding machines is perfect. It frequently happens that tape joined by sewing will wear out on the sides where it is sewed, causing the tape to run crooked, which will invariably throw the paper out of register. By using the "Metallic Tape Coupler" you will find the tape to run perfectly true and accurate. It is more durable than sewing and can be adjusted in a few seconds, (with the aid of "Parallel Pliers," especially made for the purpose), making it a great time-saver.

The Coupler for Webb presses is a little different from the folding machine Coupler, and an advantage over eyeletting together the ends of tape.

THORNE TYPE-SETTING AND DISTRIBUTING MACHINE.

Price, complete with all fixtures, on application.

The Thorne machine, using type, produces perfect typographical results as well as great economy. It is simple in construction, and does not require the attendance of a machinist. The distribution is automatic, and, while both the distributing and setting mechanisms are contained in one machine, each operation is independent.

The key-board resembles that of a type-writer, except that it is larger and has more keys. The arrangement of the keys is such that in playing in the direction indicated by the figures 1-2-3-4, etc., to 90, the operator may play with the utmost rapidity; thus the word "and" with the space which would follow it, is located as represented on the diagram by keys numbered 12-14-16-19, and even if these keys should be played simultaneously, the word would come into the line correctly and be followed by its space. Repeated tests of speed taken while operators were engaged in actual work have demonstrated that the machine will produce type at the rate of over 9,000 ems of solid type per hour, seven or eight lines per minute of minion, containing twenty-two ems of type each, being frequently produced by rapid operators.

THORNE TYPE-SETTING AND DISTRIBUTING MACHINE.

The power required to drive each machine is very light, three to five machines being driven by a one-horse power electric motor. While any steady power is all that machines require, electric power, being most steady, is recommended. Electricity has come into such universal use that it can now be obtained for power at very low rates in almost any of the cities of this country.

FEATURES OF THE THORNE.

Among other decided advantages possessed by the Thorne are that it sets and distributes simultaneously or separately, at will; requires less than five feet square of floor space for the machine; is simple in construction, and made to the highest standard of mechanical excellence.

The Thorne is thoroughly adapted for all kinds of book and newspaper composition. The shortest "takes" can be handled as expeditiously on the machine as by hand compositors—which feature will be especially appreciated in its use in daily newspaper offices.

The machine is easily kept in working order, is simple and durable in construction, and for running requires but little more power than an ordinary sewing machine.

"Proofs" from matter set on the machine are much "cleaner" than those from matter set in the ordinary way; the "distribution" being automatic and absolutely correct, there can be no typographical errors from that source.

The machine may be used twenty-four hours a day if desired, the distribution being automatic, as above stated, and no time required to "fill the cases" as in hand work.

Wherever used they displace all frames and cases for body letter, except cases for the type used in correcting proofs. One machine occupies about the same floor space as a compositor's frame. In a room filled with machines twice as much type can be set as in the same room filled with frames and cases.

Anybody who has intelligence enough to run an ordinary type-writer can easily learn to operate the Thorne; yet it is doubtless true that practical compositors, by their familiarity with the use of type, the rules of the craft, and various little dexterities which are well understood among printers, become expert in the use of machines more quickly than the ordinary mortal.

The shortest "takes," two-line letter "ads," market reports, sporting programmes, foot-ball results, and open advertisements not containing many different sizes of type, are set with great celerity and economy by aid of the Thorne, features specially valuable in newspaper composition. Italics also are readily inserted.

Composition by the Thorne is very compact, having few, if any, make-evens, and saves both the time and the money (paid for inserting quads) expended in the numerous make-evens resulting from hand composition when copy is cut into short "takes."

The wretched tedium of distribution is avoided, and the physical and mental strain involved in composition is minimized.

SCHEME FOR ORDERING SORTS.

The following Table will be found useful in ordering Sorts. It contains a rough estimate (taking Brevier as a standard) of the amount which the respective boxes of the regular full-size lower case will contain. The first two columns give the letters and weight to box; the last two columns the letters and the number it takes to weigh a pound. Of course, these quantities and weights will vary for different sizes, and printers will have to use discretion in calculating other sizes than Brevier.

LETTERS.	Weight to Box.	LETTERS.	No. Letters to Pound.
a, c, d, h, i, m, n o, r s, t, u, v, w, y, and comma	2 lbs.	a, b, d, g, h, k, n, o, p, q, u, v, x, y, z,	582
f, g, l, p, v, w, y, and comma	15 ozs.	c, e, r, s, t	682
j, k, q, x, z, figures, etc	6 "	f, i, j, l	850
e	3 lbs.	m, w	398
Cap. Case	5 ozs.	Period and commas	1400

NUMBER OF EMS CONTAINED IN A POUND OF TYPE.

5½-POINT No. 11.

Width of alphabet, 16 ems.

John Milton, the most illustrious of the whole line of English poets, was born in his father's house, the Spread Eagle, in Bread street, London, on the 9th December, 1608. His father was a scrivener, or money broker, who had embraced the Protestant faith, and who appears to have been a man of considerable parts. The scrivener seems to have been most anxious to give his son a good education, and placed him early under private tuition; from thence he was sent to St. Paul's School, and afterwards to Christ's College, Cambridge. It is believed that his intense study at college laid the seeds of his future blindness. After leaving Cambridge he retired to Horton, in Buckinghamshire, where his father had purchased a small estate. Here he composed some of his beautiful minor pieces. At twenty-one he composed *Milton, the most illustrious of the whole line of English poets, was born in his father's house, the Spread Eagle, in Bread street, London. His father*

ABOUT UNDISCOVERED TRUTHS.

If Isaac Newton likened himself to a child on the seashore, gathering a few pebbles brighter than the rest, and humbly said that the great ocean of truth lay all undiscovered before him; who are we \$1234567890

8-POINT

60a 24A, \$2.75

TIME FOREVER THE CRADLE OF HOPE.

It constantly flies, yet overcomes all things by flight; and although it is the present ally, it will be the future conqueror of Death. Time, the cradle of Hope, but the grave of Ambition, is the stern corrector of Fools, but is also the salutary \$1234567890

7-POINT

60a 24A, \$2.50

ALL HONEST INDUSTRY HONORABLE.

There is no discredit, but honor, in every right walk of industry, whether it be in tilling the grounds, making tools, or weaving fabrics, or selling the products behind a counter. A youth may handle a yard-stick, or measure a piece of ribbon; and there will be 1234

6-POINT

45a 20A, \$2.25

TIME TOO NARROW FOR THE DRAMA OF LIFE.

No monster of cruelty was ever dreamed of so monstrous as a Creator who could create this world and not continue it; create human beings with possibilities of accomplishment, with suggestions of happiness, and dash the cup from their lips while yet it is scarcely more than tasted. Even as it is, with the 1234567890

ROMAN WAS FIRST USED
IN THE NETHERLANDS ❁

ROMAN was introduced into the Netherlands by Johannes de Westfalia, who, it is said, brought it from Italy in the year 1472. He located at Louvain, and after a number of works in semi-Gothic, published in 1483 an edition of Aeneas Silvius in the Italian letter. His font is elegant, and rather a lighter face than most of the early Roman fonts of the other countries. This printer appears to have been the only one in the Low Countries who used type during the fifteenth century; nor was it till Plantin, in 1555, established his famous press ❁ ❁

JENSON OLD-STYLE MADE BY
THE AMERICAN TYPE FOUND-
ERS COMPANY. TYPE IS SOLD
BY CENTRAL TYPE FOUNDRY

IN THIS specimen the Central Type Foundry exhibits a variation of the types of a Frenchman named Nicholas Jenson, who at Venice, in the year 1470, founded the true Roman. William Morris, of the Kelmscott Press, modified these characters from the originals, but in all the essentials they belong to the Jenson font. The form is round and clear with great boldness and dignity; the lines are full of strong black and white effects, especially adapted to old style work. Jenson derived all his Roman characters from a mixture of alphabets of various countries, modelling these letters into marvellous perfection. The original font is on about a 14-point size. The attempt to lessen the fame of the originator has never succeeded.

Specimens of Page Embellishments, Initials and Ornaments
sent on application.

THE JENSON OLD-STYLE, MADE BY AMERICAN TYPE FOUNDERS' COMPANY. FOR SALE BY THE CENTRAL TYPE FOUNDRY, SAINT LOUIS, MO.

THIS proof of the Jenson Old-style exhibits a variation of the types of Nicholas Jenson, a Frenchman, who at Venice, in 1470, founded the true Roman, which thereafter dominated all European typography. William Morris, of the Kelmscott Press, has modified these shapes from the originals, but in all the essentials they belong to the Jenson font. The form is round and clear, with great boldness and dignity; the lines are full of strong black and white effects, suited to old style work. Jenson derived his Roman characters from alphabets of various countries, modelling these letters into marvellous perfection. The original font is on about 14-point size, and consists of twenty-three capital characters (the J, U and W then not being in use); twenty-three lower case characters the same as the capitals, except that the u is substituted for v and the long f and diphthongs are added; fifteen contractions, six double letters and three points (period, colon and interrogation), making a total of seventy-three punches. Aldus Manutius eventually inherited these punches, matrices and types.

Specimens of Page Embellishments, Initials and Ornaments,
sent on application.

ROMAN CHARACTERS THE FIRST TYPE
USED IN FRANCE, IN THE YEAR 1470. ❁❁

FRANCE received printing and the Roman character at the same time, the first work of the Sorbonne press in 1470 being in a handsome Roman letter, about Great Primer in size, with a slight suggestion of Gothic in some of the characters. Gering, a German himself, and his associates, had learned their art at Basle, but cut, and probably designed, their own letter on the best available models. Their font is rudely cast, so that several of their words appear only half-printed in the impression, and have been finished by hand. It has been stated erroneously, by several writers, on the authority of Chevillier, that their font was without capitals. The font is complete in that respect, and Chevillier's expression, "lettres capitales," as he himself explains, refers to the initial letters for which blank spaces were left to be filled in by hand. Besides the ordinary capital and lower-case alphabets, the font abounds in abbreviations. This letter was used in all the works of the Sorbonne press, but when Gering left the Sorbonne and established himself at the Soleil d'Or, in 1473, he made use of a Gothic letter. In his later works, however, new and greatly improved fonts of the Roman appear. Jodocus Badius, who by some is erroneously supposed to have been the first who brought the Roman letters from Italy to France, did not establish his famous Prelum Ascensianum in Paris until about 1500, when he printed in Roman types—not, however, before one or two other French printers had distinguished themselves in the introduction of printing from the adopted Roman characters.

THE ORIGIN OF ROMAN TYPES, WITH CHANGES BEFORE AND AFTER REACHING ENGLAND. ❀❀❀

THE Italian scribes of the fifteenth century were famous for their beautiful manuscripts, written in a hand entirely different from the Gothic of the Germans, or the Secretary of the French and Netherlands calligraphers. It was only natural that the first Italian printers, when they set up their press at Subiaco, should form their letters upon the best model of the national scribes. The Cicero de Oratore of 1465 is claimed by some as the first book printed in Roman type, although the character shows that the German artists who printed it had been unable wholly to shake off the traditions of the pointed Gothic school of typography in which they had learned their craft. The type of the Lactantius, and the improved type of the works that were subsequently printed by Sweynheim and Pannartz at Rome, as well as those of Ulric Hahn, were, in fact, Gothic-Romans; and it was not until Nicholas Jenson, a Frenchman, in the year 1470, printed his Eusebii Praeparatio at Venice, that the true Roman made its advent in Italy, which was then destined to become the ruling character in European Typography. Fournier and others have considered that Jenson derived his Roman letter from a mixture of alphabets of various countries; but it is only necessary to compare the Eusebius with the Italian manuscripts of the period, to see that no such elaborate selection of models was necessary or likely. Jenson's font is on a body corresponding to English. The form is round and clear, and differing in fashion only from its future progeny. The capital alphabet consists of twenty-three letters (J, U, and W not being yet in use); the lower case alphabet is the same, except that the u is substituted for the v, and in addition there is a long i, and the diphthongs. To complete this font, there are fifteen contractions, six double letters, and three points, the . : ? making seventy-three punches in all. Jenson's Roman letter fell after his death into the hands of a firm of which Andrea Torresani was head. Aldus Manutius subsequently associated himself with Torresani, and, becoming his son-in-law and heir, eventually inherited his punches, matrices, and types. The Roman fonts of Aldus were eclipsed by his Italic and Greek, but he cut several fine alphabets. Renouard mentions eight distinct fonts between 1494 and 1558. Roman type was adopted before 1473 by Mentelin of Strasburg, whose beautiful letter placed him in the front rank of the German printers. Gunther Zainer, who settled at Augsburg in 1469, after printing some works in the round Gothic, also adopted, in 1472,

18-Point

24a 8A, \$6.00

12a 4A, \$3.50

Nothing can supply the place of books. They are cheering or soothing companions in solitude, illness or affliction. The wealth of both continents would not compensate for the Good they impart. Let every man, if possible, gather some of the best books under his roof

12-Point

32a 10A, \$5.00

16a 5A, \$3.00

Nay, in thy own mean perplexities, do thou thyself but hold thy tongue or one day. On the morrow, how much clearer are thy purposes and duties; what wreck and rubbish have those mute workmen within thee swept away, when intrusive noises were shut out! Too often is speech not, as the Frenchman defined it, the art of concealing thought; but of quite stifling and suspending thought, so that there is none to conceal. Speech, too, is great, but not the greatest. As the Swiss inscription says: Sprechen ist silbern, schweigen ist golden; or, as I might rather express it: Speech is of time and silence is of eternity. Thomas Carlyle

6-POINT GERMAN, No. 1.

Indem wir den Buchdruckerei-Besitzern dieses Circular mit Schriftmustern vorlegen, glauben wir uns berechtigt unsere Geschäftsfreunde mit einiger Genugthuung auf die Thatsache hinweisen zu dürfen, daß unsere Schriftgießerei eine der wenigen in den Vereinigten Staaten ist welche die Accente für deutsche, spanische, französische, u. s. w. Schriften so vollständig und richtig liefert. Wie der täglich größer werdenden Bedeutung des deutschen Elementes an der Pacific Küste haben wir diesen Zweigen unseres Geschäftes immer größere Aufmerksamkeit gewidmet und geben uns deshalb der Erwartung hin, daß uns das Vertrauen unserer deutschen Geschäftsfreunde im bisheriger Maße erhalten bleiben wird. Wir werden nichts verschäumen, dasselbe auch in Zukunft zu rechtfertigen. American Type Founders' Co., San Francisco. Indem wir den Buchdruckerei-Besitzern dieses Circular mit Schriftmustern vorlegen, glauben wir uns berechtigt, unsere Geschäftsfreunde mit einiger Genugthuung auf die Thatsache hinweisen zu dürfen, daß unsere Schriftgießerei

GERMAN ROMAN.

9-POINT GERMAN No. 1.

Der größte Meister in der Form, welchen unsere zweite Blüthezeit unter den Epigonen hervorgebracht hat—und ihnen ist diesmal so wie in der früheren Glanzperiode die Meisterschaft in der Form aufbehalten—ist der an Rückert angeschlossene, allgemein bekannte Graf August Platen. Wohl schwerlich wird seinen Gedichten Erfolg zu Theil werden, den er selbst als den reichsten Lohn des rechten Dichters abcd efghijklmnopqrstuvw. Der menschliche Fleiß hat die Erde aufgebaut und den widerstrebenden Boden durch sein Beharren und seine Geschicklichkeit überwunden. Dort hat er dem Meere Land abgewonnen, hier dem dürrn Land Ströme gegeben. Zonen und Jahreszeiten hat der Mensch durcheinander gemengt, und die weichlichsten Gewächse des Orients zu

10-POINT GERMAN No. 1.

Und doch wäre es für den Freund des Schönen ein sehr niederschlagender Gedanke, wenn diese jugendlichen Blüthen des Geistes in Fruchtzeit absterben, wenn die reifere Cultur auch nur mit einem einzigen Schönheitsgenuß erkaufte werden sollte. Vielmehr ließe sich auch in unsern so unpoetischen Tagen, wie für die Dichtkunst überhaupt, also auch für die lyrische, eine sehr würdige Bestimmung entdecken; es ließe sich vielleicht darthun, daß, wenn sie von einer Seite höhern Geistesbeschäftigungen nachstehen muß. Und doch wäre es für den Freund des Schönen ein sehr niederschlagender Gedanke, wenn diese jugendlichen Blüthen des Geistes in Fruchtzeit absterben, wenn die reifere Cultur auch mit einem

ACCENTS, CLASSIFIED.

We make all of the following accents in Minion, Brevier and Long Primer No. 14.

We make regular accents for all foreign languages in all other sizes of romans and old styles, and all pronunciation accents or diacritical marks for Nonpareil Title No. 4; Minion Antique No. 6, Brevier Antique No. 6 and Great Primer No. 4.

We also make Spanish Accents with all job faces shown in this book with but few exceptions, and we will make those if ordered.

Special accents made to order, the cost of matrix being from \$2.00 to \$3.00 each.
