The Pen's Triumph: Being A COPY-BOOK,

Containing variety of Examples of all Hands practis'd in our Nation according to the present Mode; Adorned with incomparable Knots and Flourishes.

Most of the Copies consisting of two Lines only, and those containing the whole Alphabet; being all distill'd from the Limbeck of the Authors own Brain and an Invention as useful as rare.

With a discovery of the Secrets and Intricacies of this Art, in such Directions as were not published, which will conduct an ingenious Practitioner to an unimagined height.

Also a choice Receipt for Inke.

Invented, Written, and Engraven by Edward Cocker, dwelling on the South side of St Church, over against Paul's Chain, where he teacheth the Art of Writing.

Are to be sold with other of the Authors Works, by Samuel Eyre Stationer, at the great North door of St Paul's Church London. 1658.
To the most ingenious and most industrious
P E N - M A N and E N G R A V E
my honoured Friend
Mr E D W A R D C O C K E R.

Thus comes my Muse, like Sheba's Queen
The blest admirer of thy Works and Thee:
She's come from places far remote and high,
Like Strada's Nightingale to sing and die;
Whose Swan-like Epicedium shall be
Thy loud Triumphal and her Elegie.

Rare Artist, hear the Musick of her Tongue,
Who makes thy Worth the subject of her Song:
Thy Worth, whose praises every one shall sing,
In compass of the universal Ring.

I view'd thy Works, one view enheavened sense,
And caus'd my Love and Joy then to come:
A civil war within me, where they strove
Which for thy Honour should triumphant
While Love and Joy were striving for the prize
Comes Admiration and bears all away.

Thy Pens Experience first salut
'Twas wisely done, experience makes us wise:
Next comes Arts Glory leaping from
Of thy rich Fancy, O'tis come, tis come!
I Belgie, France, Rome, all the World deile,
To shew such excellent variety:
But O! as if All, all these Rarities, All
These Soul-astonishing Pieces were too small;
Thy Pens Transcendency ascends the
The Glory and the Envy of our Age. (Stage,
Tea here's another: come again swift Fame,
Take thy whole Errand; This heroick Name
Crowns all the rest; This, the Pens Triumph
To see, and overcome even all proud Romes. (comes
All these unparallel'd works, these wonders done,
And but five Lustres of thy Age yet run;
Still thou driv'st on, still vigorously dost climb,
Still soars thy Genius to what's more sublime:
Below perfections Orb nought will suffice;
Thy Object's That, That, That, alone's thy Prize.

No sooner Galileus did behold
A new-born Star, but big with wonder told
The Emperour, desiring to be crown'd
The King of Tunis for the Star he found.
Thy Jacobs Staff or Astrolabe, the Pen
Shews us whole Firmaments of Stars; how then
If one only one Stars light be worth a Nation,
Should we esteem each page, each Constellation
Of thy Heaven-resembling Books, for which even all
The worlds vast Empires were a gift too small?
O that the Philosophick stone were mine,
So huge a Pen of gold should then be thine,
Compar'd to which the great Goliah's Spear
Should like a Quill from a Wren's wing appear;
A pen when rais'd an end that should out-rise
All Egypt's Pyramids for vast and high.

From Imperfections Grave to true perfection,
Fair Writing gains a glorious Resurrection.
Such life thy Wonder-working hand does give,
She does not only seem to live, but live:
Nor only lives, but lives in height of State,
On her all Arts Ladies of Honour wait.
She reigns sole Empress, by thee plac'd upon
A high magnificent and illustrious Thronc.

Th' Italian is outv'd now, for thy Hand
Has pull'd down their Top-gallant, and their Land
Perfections Phoenix Nest no longer is;
She's flown this side the Alpes, from them to This.
She would have built in France, but that they say,
The Noseless people scar'd her thence away.
The Dutch-man had her, if Fame tells no lie,
But being Butler'd-finger'd let her flie.

Now
Now glorious England she is thine, and Thine
Rare Cocker, in whose Works her Beauties shine.
The Turner boasts his Rose and Ball in Ball,
But thy Pens turnings far transcends them all.
Some say the Ring Guyotto whirld about
Was rare, let it be hang'd in his own snout.
Here's Ring in Ring, Oval in Oval, and
Such sphere-like whirlings of a dextrous hand,
As make us think the Primum Mobile
Centers its quick Intelligence in Thee.
What old Drexelius by Time-swallowing pains,
With wracking and much squeezing of his brains,
Said of Eternity, by one swift run
And Heavenly motion of thy Hand's out-done.
O who can thus miraculously command
His Pen, unlesse an Angel guide his hand?
Thou dost but move thy hand, and the true shape
Of Lion, Horse, Bull, Serpent, Bear or Ape,
Come running from thy Pen, strange to behold,
Passing all wonders now, and those of Old.
Thou prov'st Pythagoras more then half divine,
Old Gordius his Knot-weaving soul is thine.
And Daedalus his mazulatory skill,
Thy knots declare is crept into thy Quill.

Ye here's a Transmigration yet unknown,
Briareus hundred hands are all thine own.
Such is thy Writing, that each single Line
Requires at least an hundred such as mine
To praise it right, yea all those will not do,
Unlesse an hundred times more witty too;
All thy high excellencies to proclaime
At once, would burst the swelling cheeks of Fan.
Nature, Art, Vertue, all their glories twine,
Concentring in one point to make thee shine.
Thy skill in Numbers who can e're expresse!
That helps to make thy Glories numberlesse.
Or who thy excellence in Graving can
Shew like thy self, O thou rare more then man
To strike a Line much finer then an Hair,
And engrave that more fine is wondrous rare:
Yet this thy hand performes, who do'st impart
Th' Incomprehensibilities of Art.
Each stroke by thy unerring hand engraven,
Shows thy arrival at Perfections Haven.
Thine own pen best thy Gravers worth displ.
Thy Graver best perpetuates thy Pens praise.
Like Caesar's, thus thy Steel-gain'd glories wilt
Be made immortal by thy powerfull Quill.
Ov'r all the Nation the shrill trump of Fame,
Shall spread the growing Glories of thy Name,
Ov'r all the Nation, yea ov'r all the world,
In Renownes Chariot shall thy name be whirled.

But hold, methinks I hear a dismal howl,
As of some Devil 'th carcase of an Owl;
'Tis the hoarse voice of Envy belching forth,
That we ov'r praise, and too high raise thy worth:
Peace Hell-hound, peace, this pile we justly raise,
Shall not the Pen the Pens great Master praise?
He wounds himself, who shoots at Arts and Parts,
Vertue is Thunder-proof and fears no Darts:
No pestilential blasts from putrid Lungs,
Though dissipat'd by more poynsonous Tongues,

Shall blast thy Fame; no, thy Renown shall dwell
On high, when Envy plunges into Hell.

Muse raise an Arch Triumphant large and high,
Command down bright Materials from the
Not a vast heap of stones, but Stars: the Sun (sky,
About this Mole-hill shall no longer run:
He shall stand Centinel on this glorious Frame,
And in Celestial Flame,
Speak forth great Cocker's Name.

Wisdom is quintessence, whose radiance forth in bright sparkling excellence blazes.
Forsake not Vertue, but frequent her ways:—
Her Rules long practiz'd may exalt thy praise.
Sublime ab sublime,
God's Precepts who forsake, themselves expose
To unconquerable tyrannizing Foes.

Cocker.

Have evermore a care of what you exercise:
Be quick & diligent in what you enterprize.
Such as to censure in the front appear
Will when they should performe be found with Read
Braine-drowzze qualmes cappell, be valiant, play the mas.
Hee oft-times gaines the field who bravely thinkes hee
Fame, and Renowne w. all their Braine attend
Him, who to sacred Vertue is a Friends.
Let others court the Camp, the Court, or Towne, 
And make their aim Wealthe, Pleasure, or Renowne: 
The Pen, Art, Virtue, only these give mee. 
I would not for their Six exchange my Three.

Sw. Cocker
Many would be contented to dwell in the Temple of Homer, but the way thither gives them small contentment: for tedious Peregrination in the ways of Virtue & Industry corresponds not with every man's inclination and temper.
as from an immaculate Fountain, by reason of an impure and contaminated Passage, some wholesome Water may proceed. So, many endowed with excellent Parts, by having correspondences and communication with profane Persons, degenerate & become odious.

What heights! what sweets! what glories do I view!
HEAVEN! my sweet JESUS! an immortal CROMNE!
The AUTHOR here is making the largest Booke in the World, and hopes it will be the Best.
To the Lovers and Practitioners in the Art of Writing.

Might for a Preludium salute you with an Oratorical characterizing Composure or Discourse, that might win you to an Admiration and Admiration of the usefulness and Excellency of fair Writing; but such a Circumlocution and Illustration were in vain, it being of itself as far above the reach of Rhetorick, are the most incomparable Professors thereof above that of Envy, shall therefore only present you with what is pertinent and considerable, and that which well weighed and observed in your practice, will conduct you very near to the End of your Desires, which I presume is Excellence in this curious Art, if not Perfection.
DIRECTIONS.

How to make a Pen.

Being provided of a Pen-knife Razor-metall (not too thick towards its edge) or a small thin French Blade, which I have found to be as good, which you may best sharpen on a Hoane, yet after that you must (as it were) polish its edge on a Thong of Neats-Leather; you may try whether it be sharp or not on your fingers: but you had better procure the first, second, or third Quill in the wing of a Goose or Raven; which if it be too hard or dry, you may help that by laying it a while in water, or if the contrary, you may put it into warme Embers, and so in a short space cure that distemper; having scraped off the bark of the Quill with the back of your Knife, cut off about
about a quarter of an Inch, then enter your knife at the end, just in the middle of the back thereof (being like a half round) that done, the end of another Quill into that, or the haft of your knife, if it be made that purpose, and holding the Thumb of your left hand, at such a distance the back of it, as you would have the slit to reach from the end; then twiching up your knife-haft or quill, you may slit it at your pleasure, and by cutting both its sides alike, you may fashion the nib as it should be; to the end right, which is the principal thing, you must, if the quill be too thick, pare a little off; and hold the nib on the thumb naile of your left hand, then enter the edge of your knife into it sloping; but before it is quite through turn your knife downright and cut it off.

If you intend to write Italian hand therewith, the nib must be small, and almost round, with a long slit: For Secretary it must be broader; for large Italique, or that which we call Italian Text, it must be of a greater breadth; I have sometimes wrote the German Text with a great Pen having two slits.
How to hold the Pen.

Take the Pen in your hand, and place your Thumb on that side thereof which is next your Breast, not extending it so low as the end of your fore-finger; next to that, place your fore-finger on the top of the Pen, lower then your thumb about a quarter of an inch: Lastly, place your middle finger so much lower then that, on the further side of the Pen. Let there be very little space or distance betwixt the Pen and your fore-finger, but let both that and your middle finger be extended almost to their full length: Observe also that your Thumb rise and fall in the joynt, as the length or compass of the Letters require which you write, and that your little finger onely rest on the paper; nor let there be the least pressure of your hand, but bear it up with an easie pulse.
How to manage and use the Pen.

Having a Book to write in, or a sheet of paper to write on, which must be ruled with lines with a black-lead Pen or a pair of Compasses, but they are best; for if the body of the Hand you write be deep, and the Roman and Italian are, you may with them, being set at a fit distance, rule your Lines double, and thereby every Letter will be kept even at head and at foot. The want of Compasses may be supplied by a Quill cut forked, which I take to be an instrument of more certainty for that purpose, your paper lying in a good light on a Desk, or on something made sloping (it being not so good to write on what is directly level) and straight before you, your Elbow lying even with the midst of the end thereof; your hand bending outward or from you; having before dipt onely the nib of your Pen into the Ink with its hollow side downward, then begin to imitate an Alphabet of the hand you intend to write; and when your eye is from your Copy you write by, be sure it be just at the end of your pen as you move it; and when you make any part of a Letter consisting of a full downright stroke, hold your Pen right forward, turn not the nib thereof any way, but it lying flat, a
wing in your thumb and two fingers make the stroke. In the ma-
strokes, it will be convenient that you turn or move the Pen in
ward your left side most. Sometimes in the making of a Secre-
t, you must hold it as for a downright stroke, when you make
right line through those Letters. Let not your Breast lie on the
write on, nor your Nose on the Paper, but fit in as majestical a
ou can. When you would produce broad full-shadowed Letters
according to the French Mode, you must then as they do reverse
ving the hollow thereof on the inside of your middle fingers end
directly towards you, forcing it from you, not turning the Pen
d one way or other, nor move the hand at the wrist: Thus with
u may do brave things, for this bold way of writing is the most
d sets off with abundance of gallantry; an Example of which
performed by my hand, being a Print on Imperial Paper, Dedi-
at Renowned Patron of Arts, Edward Benlowes Esquire.
To fit and prepare your Paper for your use, and how to Rule it.

A white smooth-grain'd well gumm'd Paper is the best to write on; if it be not well gumm'd and clear, you may draw it sheet after sheet through Allum-water, and that will both clarify and embody it, and cause it to bear Ink well, being laid in a Press and dried handsomely. Or you may do as much in effect and not wet your fingers, by beating or grinding Gum Sandrick into powder, and tying that powder in a fine linnen cloth that is not too thick or close-weaved, and if your Paper be rugged and spungie, by rubbing that thereon, and forcing it through the cloth, your paper will be so fitted for your use, that if your Pen and Ink be good, your Letters will be as clear and smooth as you can wish. If your paper be too rough, you may with the edge of a folding-stick, such an one as Book-binders use, or a knife haft, (it being laid on a smooth board) polish it so as your Pen may run thereon without interruption. You may rule your paper with black-lead, and with white bread, or the paring-dust of white Leather, clearly fetch those lines out again. Or, if the paper you write on be fine and transparent, you may
by laying a fair sheet on another ruled with black lines, write even, and none perceive by what means. In France such as would write even, have Papers with lines pricked with small holes, through which they pounce chalk-cole-duft on the paper they write on, and after dash it off with a Feather or Hand-cherchief. You may make a device by fastening Lute strings to both the ends of a board, they being placed at equal distances, as close or as wide as you please, on which you may lay divers sheets of paper, and by rubbing hard thereon, you will make 500 lines as soon as rule five the ordinary way.

Reason may teach more Ways to rule, and I
Might swell a Sheet with rich Variety:
But who all ways of ruling does impart,
Shall not reign Monarch in this curious Art.
(9)

For Command of Hand.

When you would grace your Writing with fair compass-strokes, large Capital Letters or flourishes of any considerable dimensions, whether Oval-wise, Orbicular, or of what form soever, such as without moving your hand by the motion of your fingers only, though extended, you cannot perform, then to be blest with an obedient and commanding hand, that may in a moment pourtray to the life the Idea in your head, would be no small happiness, which that you may not want upon such an occasion; Observe

1. That your Ink be not too thick, but such as may freely run from the Pen, and that your Pen be not too soft, nor its nib too broad, nor the slit thereof too long.

2. That your paper be smooth, free from wrinkles and hairs or any thing that may stand in opposition, or prove an obstruction to the dexterous motion of your pen in the race it is to run.

3. Hold your Pen stedilly, keep your Paper from stirring, not permitting your fingers or any part of your hand to touch the same, your arme being held above the Desk you write on, and your Elbow advanced above your hand, you shall then see that,

A nimble Sphere-like whirling of the hand,
Will Capitals and curious strokes command.
The first Essay.

First I commend to your serious consideration and practice, the Alphabets of whatsoever hand or hands you intend to write, and those dissected, or in their several Fractions and Pieces according to Art. Which anatomizing of Letters, though it cannot be rightly done by any but a skilful Artist, yet, for the truth thereof, I would not wish you so much to depend upon the judgments of others, as on the knowledge which your own Experience may gain you therein; the various applications and effects of the Pen in each stroke and letter being of grand concernment to a Learner, and no way so attainable as by diligent observation and continuance of practice; which to facilitate and abbreviate, consult with the following considerations: viz.

Every part of such lines or strokes, and even the smallest particle of such Letters as belong to round hands (as most of our Secretaries now in use are) must be made, so much as is requisite, circular. The contrary is to be observed in square hands, as the German Text, our set Secretary, and many hands derived from them; but for the form of Italian hand, which participates of neither, this Distick may be pertinent.
On Oval wheeles should fair Italian run,
Smooth as the whirling Chariot of the Sun.

For the full and small in Letters and Flourishes, which is the next considerable, (and which Artfully performed, will add an illustrious liveliness and loveliness to your writing) you may be sufficiently informed by that my mysterious Characteristical Figure at the beginning of this Book. Wherein you may not be enlabyrinth'd) Note that all strokes by the same degree they incline from their lights or smallness to their fulness or shadows, must rise and decline to their most extreme fineness again, with a special regard to the exact quantity of both. So in all strokes circular, or any wayses tending to the form, of what magnitude soever; demonstrated by the Superficies of the Figure being a Circle, and divided according to this Rule, by the lines drawn through it. From the observation of which lines you may extract these and more infallible conclusions, viz. That all strokes descending from the left hand to the right must be full, and contrariwise that all strokes descending from the right to the left must be small. You may conclude also by the Perpendicular line therein, that all down-right strokes must be full; Also by the right lines of the Quadrangle therein, you may see how all Traverse or Cross strokes...
ought to be drawn; I shall leave the Containing and Contained objects for your own ingenuity to work upon.

For running Secretary.

Our new compos'd Courfary Secretaries should keep a kind of Correspondence with those hands whence they are deriv'd; for the variation or diverse penning of Italian hands, affording great variety for it depends much on maturity of judgment to choose, and from them such derivations as may be most expeditious, graceful, and convenient. Also so much regard must be had to the mixture of hands, as that may be an Artful compliance of Letters, and a reasonable resemblance another, for it were ridiculous for a man to crowd into a hand natural perpendicular (as our Set Secretary is) the Letters of another consiſt oblique or slanting lines, as the Roman and Italian hands do. See that though the distance of lines and letters of all hands, must be or contracted, according to their Magnitude; yet for Courfary or fast hands, there must be an allowance, and the distance of lines for this must be
be more then that of more deliberate hands, considering that a kind of irregularity and extravagancy in such hands, renders them more regular and legible; and that nothing is a greater ornament to such hands, then a spacious field, as it were, wherein the wanton meandring and spreading plus of each Letter may be fairly blazon'd.

For Set Secretary.

Our pen must be a degree harder, and the nib thereof broader for this hand, then for that before treated on. This hand requires much regularity, as being a Fountain from whence many other hands (as R, I, e, etc.) are derived; and, as it were, the standard, by which they are proved. Yet my opinion, as to its regularity, jumps not with that vulgarly received. For the heads and tails of all the Letters therein, ought not (in my judgment) to be confin'd to the same boundaries, but according to their man and form they should be proportion'd for height and depth.

As for example, if you rule double lines, and write therein all the small Letters of this Hand with stems, you will find that the e, consisting of an oblique...
Ground-line, and a semi-Circle, (betwixt those lines) will not require a stem of that length above the line, as the $f$ and long $f$ do, they being (as I may so say) double-bodied, being full both above and below the lines: but 'tis proper for the stem of the $g$ to be just equal in height to that of the $t$, and a small matter broader; but the $t$ (considering its additional above the upper line) that must have a longer stem, and wind off with a greater compass: The $t$ and $f$, (consisting onely of stems) they must be shorter then any of the afore-mentioned Letters. In this hand especially, your Letters must keep correspondence one with another; viz. the first part of the small $a$ must be the same as the body-part of the $t$. Your minums must be all alike, as the down-right stroke of the $a$, the strokes of the $i$, $m$, $n$, $u$, and the first of the $w$, also the circular part or body of the $a$ and small $b$ are the same as the $o$, onely the upper side of the $g$ must be light or small, in regard of the near fulness of its top. The $v$ consonant and the later part of the $w$ must be the same with the body of the $p$. Observe, not to turn the tail-stroke of the $g$ beyond its stem, and that the tail-stroke of the $g$ turn off towards your right hand as soon as your pen descends from the line. Be sure that all, except compass Letters, be drawn directly down-right, so as not to be perceived to lean to the left hand or to the right. I affect not a conjunction of Letters in the
the writing of this hand, but rather that every Letter thereof be made distinctly by itself, unless they run naturally one to another, as the i to the m, a, and u, and the a to the e, y or w, &c. Let the distance from word to word be something more than the compass of an o, and the distance from letter to letter, the same with that of your minums.

Most of the Letters in this set-form'd hand,
Must square as Cubes, or a good Conscience, stand.

For Text Hand.

These Letters, for the most part, consisting of several Angles, cannot be performed with one or two drafts of the pen, but must be designed by quarters or Cantons; in the making whereof you must seldom leave of flat, but the pieces of these Letters before they are finished must be left in a triangular forme, which must be smooth, and its points sharp, otherwise the other pieces will not joyne completely with it. For the bodies of all Letters in this hand, be they great or small, you must apply the full mouth of
an, and by turning the nib, wind off into a point, or take it up at a
occasion requires. Let the main body-strokes of your Capitals be
left, and then their dependencies; and for their flourishes, if that
made first on which all the other depend, you will be able to com-
Knots and Flourishes with more dispatch and less difficulty. If where
and the body of a large Capital shall stand, you draw a down-right or
ticular line, with a Black-lead-pen, that will be a rule for the upright
thereof, which is a principal grace. For Flourishes you may use a
fine round nib, such an one as you write Italian hand with: and
strokes, a pen about so broad at the nib as you intend them: but
commonly does the work with me; for with that corner of a Text-
and your left hand you may produce as fine hair-strokes, as with a
for that purpose; but by blunting that you will run the hazard of
your great full strokes ragged. You must not think (though they
be one sole Tract) to make such intricate Knots as are proper for or-
f these Letters, at one draft, but must be contented to design them
other piece, as many labouring Writers have done before you: but
other way, which I shall be ready to impart to such as deserve it.
ght of those Letters with stems must be about twice so much as the
your minums; though varied, as those of the Set Secretary. For
For German Text.

The body of this Hand you may best perform with a small squar'd Brass, which being laid even with your upper line, you may with a broad-nib'd Pen draw down all the perpendicular lines, which this hand most consists of; and if your hand be not certain, you may rule double lines both for the top and bottom-turnings of these Letters, which must all turn'd in form of a semi-circle. The distance betwixt your minums must be but little more than their breadth, and so from one letter to another in words, and therein they must joyn and be united both above and below.

Who more of this Gigantine Hand would know,
And view, to Church, and not to School must go.

D
For Roman Hand.

It will conduce much to the exact symmetric and beauty of the Roman hand, to consider its dependencies on the form of a Circle, as the Italian on that of an Oval: Of necessity all compass Letters therein, whether small or Capitals, as C, G, 0, Q &c. must carry with them a visible roundness. It is not proper for the Letters thereof to join, it being derived from a hand originally disjunctive, therefore extend not the unitive or turning off strokes, as those from the bottom of the a, c, e, i, &c. so far as those of Italian Letters, nor so far as may cause one letter to stand from another, in the composition of words, further then your minums or body-strokes of the small m. The stems of the letters in this hand, must wave and bend naturally, & the bodies of all letters herein must be full, but not so full as those of a down-right hand, considering they are slanting. The stems should be thrice the length of their bodies, and some small matter more; the distance of lines for this hand must be so much as a stem is in length, and about half the depth of the round letters.
For Italian Hand.

This hand in its native Countrey is wrote with unimitable (and I might say unimitable) dexterity; whether for that the Italians are generally more airy than we, or that by their manner of holding the Pen (which is betwixt the fore-finger and the thumb, extended) they have that advantage of us, is not easy to determine: but sure I am they are masters of that facility, which never any of our Nation could justly pretend to in their hand; yet this I dare aver, and it makes as much for the honour of us, that (though the Alpes stand betwixt them and us) in that regard, we have past more Alpine difficulties, and ascend nearer to perfection in this hand, than even the Italians themselves. I speak as to the ablest professors hereof on both hands; for I am not ignorant that it is but in a manner in its Minority with us, in regard of a general practice. Yet that it may thrive in our Climate, and become serviceable, I communicate a considerable part of my knowledge therein, as may appear by the following Rules. The Italians holding the Pen, as aforesaid, do most of them (contrary to the custome in England on that account) so fast as they write their lines, draw their paper with their
their left hand from the right; so moving it one way and another, as their lines are begun and ended, which may be one reason of a more than ordinary dispatch.

In this Hand every return or double stroke of the Pen must have a double portion of fulness (which the Pen, in a good hand, naturally produces) which you may see in the stems of all Letters drawn or ascending from the feet or bottoms of others, as b from a, h from c, l from i, or a, &c. and so in the backs or fore-parts of all other Letters, whether swell'd to that fulness by the tails, or uniting parts of others, caus'd by ascending and descending of the Pen, as also of themselves, where the Pen freely and naturally returns; which appears in the back of the a, g, q, and y; the worthiness of this Observation is eminently confirm'd by variety of other Letters, and their several parts; and indeed herein lies the life and lustre of Italian Hand, for the obliquity thereof undeniably exacting the edge of the Pen, it would want much of its grace and beauty, did we not make use of the Pens effects in this kind. When the stems of Letters turn off, and wind themselves into the form of Ovalls, as often the b, d, f, b, k, l, p, q, and y do; or when the space from the Line drawn up to that coming down be too wide, as sometimes in the b, d, f, &c. then you must observe the Effects of the Pen, and humour
humour your Letters, according to the most pleasing fashion, not permitting the fulness of any strokes made by Art to be so broad as the shadows which proceed from the Pen uncompell'd. You may (if the distance of your lines will afford it) take the liberty of extending the heads and tails that turn off, somewhat longer then those which do not. When a stroke turns twice or thrice about, its fulness must decline as soon as possible. In these few are couched all the material considerables for this Hand, though more may be said then here is wrote: but

These practis'd well may mount us where proud Rome,
Though Hills were set on Hill, shall never come.

For Print Hand.

Take care that the stems of your Print hand, or round Roman Letters be proportion'd for length, according to the dimension or compass of their bodies, and that the distance of your Lines be so fitted to the size of your Letters, that the tail-stems of your Letters in one Line, fall not into the head-stems of your Letters in the next Line below it. Also observe that the circular part of the b, d, p, and q, be exactly the same with the o. And that the c, and e, have the like compass; also let the head of the g be less then the o, standing above the lower Line, so you will have room
room to give the tail thereof its true turnings, and not hazard touching the stems of
the Letters in the next line below it. The short ground-lines which the Print-hand
Letters stand on, must have a visible squareness at each end, and not be so fine as
the edge of the Pen might make them.

More strict Observations.

If for the body of Print-hand, or round Roman, you rule two right Lines, the
stems of all your Letters both above and below those lines, must want one fourth part
of their depth. Observe also that the length of a minum and an half is the exact di-
stance from the bottom of the Letters in one line, to the top-line of that below it, and
the stems of the small Letters are the direct height of the Capitals. And although
you may vary the size of your Letters, you must, notwithstanding, keep punctually
to these Rules, there being no observations for any hand, promising more infallib-
ilitie.
To make Ink.

Take three Ounces of Galls which are small and heavy and crisp, put them in a vessel of three pints of Wine, or of Rain-water, which is much better; letting it stand so infusing in the Sun for one or two days; Then take two Ounces of Coppris, or of Roman Vitriol, well colour'd and beaten small; stirring it well with a stick, which being put in, set it again in the Sun for one or two days more. Stir all together, adding two Ounces of Gum Arabique of the clearest and most shining, being well beaten. And to make your Ink shine and lustrous, add certain pieces of the Barque of Pomgranat, or a small quantity of double-refin'd Sugar, boylinge it a little over a gentle fire. Lastly, pour it out, and keep it in a vessel of Glass, or of Lead well covered.

Now it's probable, what I intend as Medicine for the good of All, will be evilly entertain'd, and converted into Poison by some, (for this will appear before faces sowe enough to turn Nectar into Vinegar, and those of our own Faculty too) the reason whereof (though mainly for want of Reason) may be guess at,
at, for they'll even angry with their Eyes for seeing more knowledge communicated to every Boy, then every Master was before accomplish'd with; but when they shall know that here's not one tenth of what I could have wrote on this account (and to as much purpose as the most vigorous significant Line in all these Directions) and that All that I am enrich'd with in this kind is at their service, which (if they had it) would render them capable of teaching whosoever (bail only know what I here publish: then I hope they'll cheer up again, and look with as pleasant a countenance on my Book as I shall upon them.

On this admired Book, and its more admirable Author.

Each Draught With Admirable Rarities Done,
Choice Oval-Circling-Knots Exactly Run.
