- o The hyphen is a breaking space. This can be typed between words that might break at the end of a line, without putting a space between them. A hyphen can be found at shift=-
- o opt=- and opt-space produce a narrow space, useful for adjusting spacing of subscripted letters
- o opt-n+n produces ◌ and there are other nice surprises to be found with a full view of the font, i.e., through PopChar, etc
- o If you would like a version for other OS (Linux, etc) or find mistakes, or omissions, please contact Nance at <inkish@mac.com>
