Thank you for visiting my site and downloading the latest version of the Chrysanthi Unicode font. Please be sure to visit again soon for more updates, or if you wish to be notified when new updates come out, please email me at redneck_witchboi@yahoo.com.

This font is freeware and still very much in progress. It started out as a project to allow users to type all unicode latin characters, and has quickly grown to include greek, cyrillic, hebrew, arabic, hiragana, katakana, dlatci, chrysanthi, devanagari, tibetan, bengali, and much more. The following pages detail the characters contained in the font. For more information on how to use unicode, please refer to the Unicode standard at http://www.unicode.org/.

Note: This font was not created in connection with the Unicode Consortium and does not identically follow the unicode standard. Notes in the following text indicate where the Chrysanthi Unicode font deviates from the unicode standard.

A 20% grey letter (○) indicates a combining character.
Latin Extended-B (complete + 6 additional)\textsuperscript{1}

\textsuperscript{1} These characters are not part of the Unicode Standard, and have been mapped to private use sectors 0234 – 0237. These characters are used in the Tsesisca language. I have also mapped a capital and lower-case ezh to 0220 and 0221, respectively.
IPA Extensions (complete)

Spacing Modifier Letters (complete)
Because this is not a fixed width font, the combining marks will not line up precisely with all characters. I have tried to make them line up as well as possible with as many characters as possible.
